

Viewing a Course as a Student

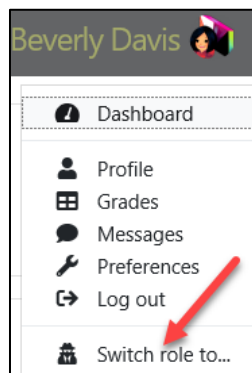

When you are editing a course page or activity, it may be helpful to temporarily view the course as a student would see it. You can do this using the **Switch role to ...** function.

Using the Switch role to ... function

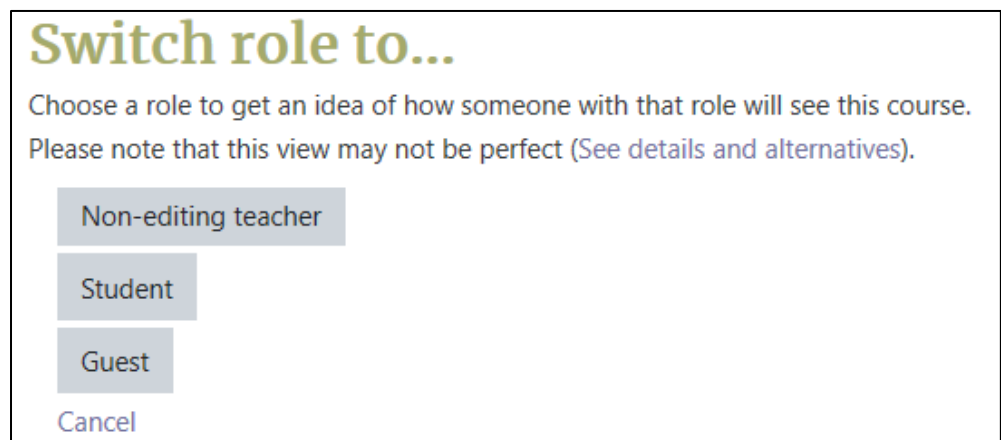

1. Locate the **Switch role to...** function by clicking on your name at the top right side of the screen.

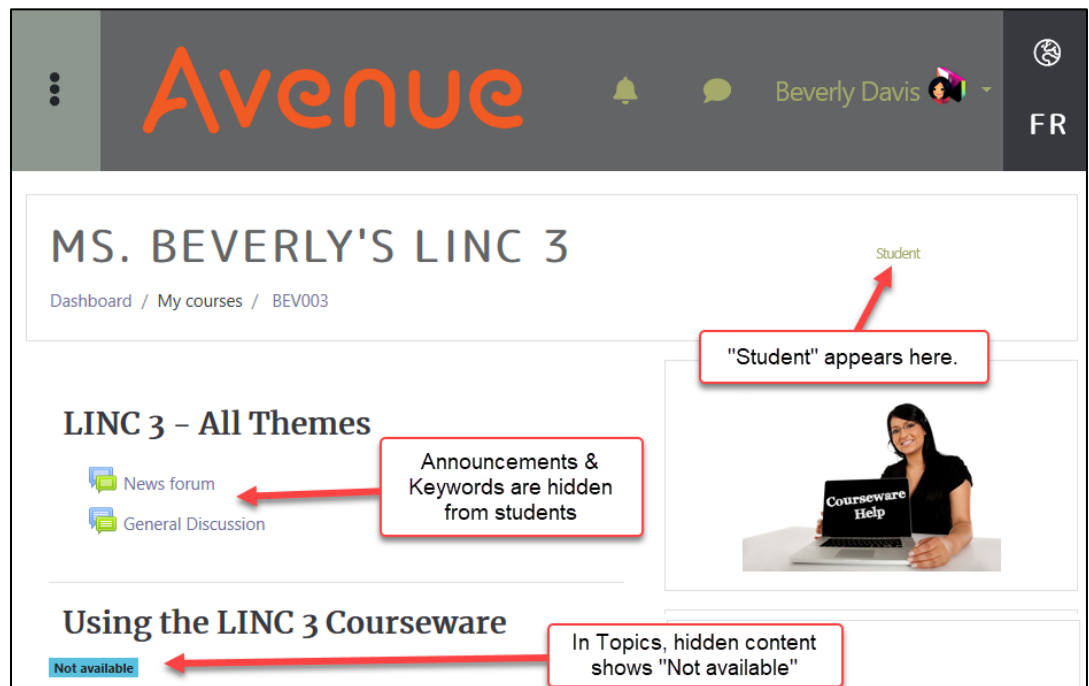

- A drop-down menu appears.
2. Click on the **Switch role to...** option.
 3. Role options appear.

4. Click on the role **Student**.

- This is the student view of the page:

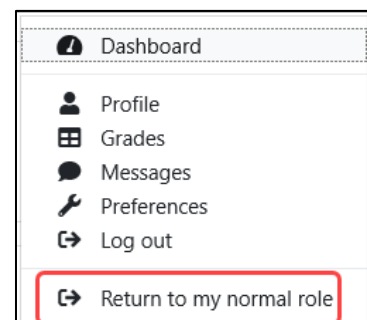

- Note: There is a **Course settings** option to make hidden topics completely invisible to students.

5. To return to your teacher role, click on **your name**.

6. Click on **Return to my normal role ...** to exit the student view.
